

Arrowwit

A complete liquid vitaminic emulsion for pigs and cows

It is known that vitamins found in the natural environment are in a liquid form. By adding particular emulsifiers you can obtain a stable substance made up of fat-soluble vitamins (A, D3, E), hydro soluble vitamins (B) and some hydro soluble vitamins such as zinc and selenium.

TENORI ANALITICI

Humidity	81%
Untreated Protein	0,1%
Untreated Fats	6%
Untreated fibre	0,1%
Untreated ash	1,2%
Lysine	0,01%

INTEGRAZIONE PER KG

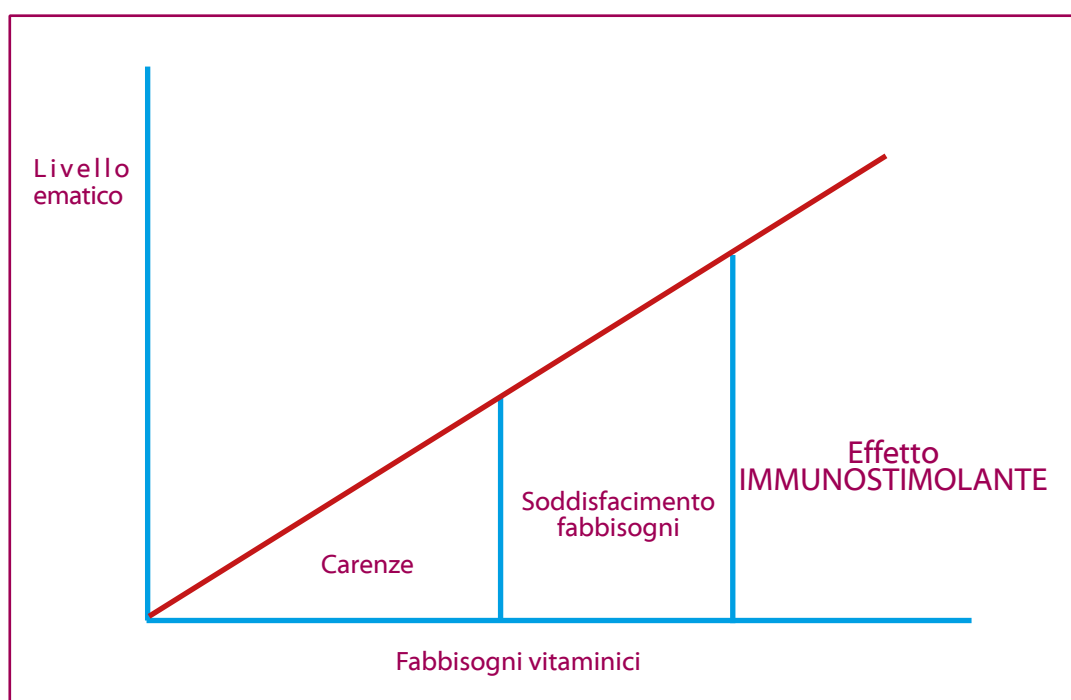

E672 Vitamin A	1.440.000 U.I
E671 Vitamin D3	140.000 U.I.
Vitamin and Acetate	10.000 mg
Vitamin B1	350 mg
Vitamin B2	160 mg
Vitamin B6	140 mg
Vitamin B12	2,1 mg
Vitamin PP	3.500 mg
D-pantotechnic Acid	700 mg
Vitamin K3	300 mg
(menadione bisulphite sodium)	
Vitamin H (biotin)	14 mg
Choline chloride	10.000 mg
E8 Selenium (selenite sodium)	50 mg
E6 Zinc	5.100 mg
(zinc chloride monohydrate)	

Arrowit has been created with the aim of challenging the main problems in intensive breeding farms such as warm weather (in summertime), reproductive syndromes and reduction of productiveness due to immune deficiency syndromes.

Arrowit

How it works

Arrowit is an emulsion of liquid vitamins that becomes completely absorbed into the gastro intestinal passage. This allows high levels of vitamins to enter into the blood system; something which is impossible with traditional powder vitamins. A high level of vitamins in the blood produces **ROBUST PROTECTION AND IMMUNIZATION** which is the real mission of vitamins.

Advantages

Animal reproduction

Enhances the reproductive performance with more evidence of being receptive and it improves fertility rates

ENHANCES THE IMMUNE SYSTEM

ANIMALS ARE MORE RESISTANT
