

# YOSU<sup>®</sup>

## More than just milk

**It's a yoghurt derived from the drying of the product for human consumption.**

**Its contents stem from fermented milk from bacteria and small amounts of ingredients normally found in yoghurt such as fruit, cereal and proteins.**

**The bacterium in the yoghurt uses the lactose to bond to the milk protein to make it highly digestible.**

# YOSU<sup>®</sup>

**COMPLIMENTARY FEED FOR PIGS AND COWS**

*High quality nutritious feed with an excellent quality of biological protein and digestibility (97%-98%), also rich in essential amino acids..*

*It's appropriate for the diets of piglets, calves, horses and small animals (pre-starter, starter) as it guarantees early engagement with food, elevated growth and a better rate of metamorphosis*

*It causes a large appetite and digestibility of the feed. It is easy to mix and has a long life.*

*It is acidified from the bacteria fermentation (pH6): a characteristic with favours the settlement of 'positive' acidophilus flora in the intestine.*

*It reduces the possibility of intestinal illnesses.*
